Art Unit: 2834

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2-13 and 16-18 are rejected under 35 USC 102 (b) as being anticipated by Abe noting figure 2 of Abe, there is shown a piezoelectric stack #26 an isolating material with at least a portion in direct contact with said piezoelectric stack (silicone oil) an actuator housing that having a shell #144, #144a and a time and dimensionally stable actuator top #28 and actuator bottom #30, electrical leads #32, #34 extend outwardly through the top #28. The corrugation #144a allows the shell to stretch when the piezoelectric stack expands. The housing is filled with silicone oil.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 14 and 15 are rejected under 35 USC 103 (a) as being unpatentable over Abe. These claims specified a particular use (other than a fuel injector) for the piezoelectric actuator. It has long been held that the mere substitution of one equivalent device for another is within the skill expected of the routineer. The use of piezoelectric actuators in both sonotrodes and proportional valves is known per se (official notice taken-see also prior art cited by applicant). Thus to substitute eight this actuator with its increased cooling capacity and protection of the piezoelectric elements from short circuit (flash over) with the silicone oil filler for a generic piezoelectric actuator used with a proportional valve or sonotrode of the prior art would have been obvious to one of ordinary skill in the art.
